

Functional description

Energy management system (EMS)

Project information

Project	Sample project - self-sufficient energy system
Client	Musterkunde GmbH, Musterstraße 1, 12345 Musterstadt
Contractor	MSR-Innovations GmbH
Prepared by	Max Mustermann
Date	1 January 2026
Revision	Rev. 1.2 (sample)

English translation of the anonymised German sample. Project names, dates and values are sample information.

Distribution of this document

Distribution of this document and its contents is permitted only with the consent of MSR-Innovations GmbH. The document and its contents are provided confidentially as agreed with the contracting party, unless separate arrangements have been agreed.

1 Note on this sample document

This is an anonymised sample document. It shows the cover, confidentiality page and the complete contents of the original document and ends at that point. The substantive chapters are not included in this sample.

This document was prepared for MSR-Innovations GmbH. Client-specific documents are used or created for each company.

All project, company, personal and location details and all dates have been replaced with sample information. MSR-Innovations GmbH is identified as the author. The structure, chapter sequence, reference page numbers and extent are retained from the German original.

Characteristic	Details
Document type	Functional description
Discipline / technical field	Building automation, energy management system (EMS), hydrogen energy technology
HOAI work stage	Stage 5 - detailed design
Length of the original	32 pages
Main chapters	8
Total contents entries	62 (including contents pages)
Hierarchy depth	5 levels
Revision	Rev. 1.2 (sample)
Language of the original	German

Table 1: Profile of the original document.

2 Contents of the original document

The following overview reproduces the complete contents of the original document, with every chapter heading and its original page reference.

Chapter	Original page
Distribution of this document	2
Contents	3
1 General description	6
1.1 Primary energy generation	6
1.2 Energy storage and conversion	6
1.3 Self-sufficiency target	6
1.4 Installation location and spatial layout	6
2 Project description	7
2.1 System configuration	7
2.1.1 Generators - photovoltaic system and PV inverters	7
2.1.2 Consumers	7
2.1.3 Internal grid	7
2.1.4 Grid connection (emergency)	8
2.1.5 Battery system	8
2.1.6 Electrolyser	8
2.1.7 Hydrogen storage	9
2.1.8 Compressor system	10
2.1.9 Fuel cell	10
2.1.10 Heat recovery system	12
2.2 Operating modes of the overall system	13
3 EMS functions	14
3.1 Electrical energy management	14
3.1.1 Control principle	14
3.1.2 Priority sequences - energy surplus	14

Contents of the original document (continued)

Chapter	Original page
3.1.3 Priority sequences - energy deficit	15
3.1.4 Automatic operation of the battery system	15
3.2 Hydrogen system	15
3.2.1 Automatic operation of the electrolyser	15
3.2.2 Automatic operation of hydrogen storage	16
3.2.3 Automatic operation of the compressor system	17
3.2.4 Automatic operation of the fuel cell	18
3.3 Heat management	19
3.3.1 Fuel cell heat recovery	19
3.3.1.1 Operating case 1 - normal operation (buffer charging)	19
3.3.1.2 Operating case 2 - buffer full (emergency cooling)	20
3.3.2 Buffer tank immersion heater control	20
3.3.2.1 Operating case 1 - temperature-controlled operation (heat demand)	20
3.3.2.2 Operating case 2 - surplus PV generation	20
3.3.2.2.1 Automatic operation of immersion heater 1	21
3.3.2.2.2 Automatic operation of immersion heater 2	21
3.3.2.2.3 Automatic operation of immersion heater 3	21
3.3.2.3 Power limitation during simultaneous FC operation	22
3.4 Ventilation control	22
3.4.1 Ventilation during FC operation	22
3.4.2 Emergency ventilation in "Plant room 1"	23
3.4.3 Emergency ventilation of the compressor container	23
3.5 Safety-related EMS functions	24
3.5.1 Gas detection system	24
3.5.2 Gas alarm levels and EMS response	24
3.5.3 Standstill monitoring and forced start	24
4 Measurement acquisition	25
4.1 Electrical measurements	25
4.2 Heat measurements	25

Contents of the original document (continued)

Chapter	Original page
4.3 Hydrogen measurements	26
4.4 Safety measurements	26
4.5 Weather station	27
5 Visualisation / HMI	28
6 Alarms	29
7 Maintenance	30
8 Communication and data interfaces	31
8.1 Communication overview	31
8.2 Metering diagram	32

Table 2: Contents of the original document (anonymised).
